10  /**
11   * A JOIPanel displays a button and a message.
12   * Pushing the button changes the message.
13   *
14   * This class provides both the panel and the listener for
15   * the button on the panel - a common GUI programming idiom.
16   *
17   * The panel can be displayed either from an applet
18   * in a browser or by the JVM as an application.
19   *
20   * @version 10
21   *
22   */
23  public class JOIApplet extends Applet implements ActionListener
