CS 437/637

Database backed websites and web services

Accessing 'plum.cs.umb.edu' server

Instructor:

Wei Ding

Vamsi Krishna

We have installed PHP and Oracle in Plum server.

Requirements to access Plum server:

1. Need to have a class account
2. Need to have a oracle account created.
3. Need to be enrolled in CS637/CS437 class.

How to access?

1. Open SSH shell
2. Login using your student account into users.cs.umb.edu server.
3. Cd to public_html.
4. Place files under this folder.
5. And then browse the files using plum.cs.umb.edu/~studentAccount/path_filename

The difference is that plum server can interpret the php code whereas the users server account cannot.
