This one looks correct:

drwxrws--- 8 hdeblois cs410-2 4096 Oct 1 17:06 GROUP2/

chgrp cs410-2

then

chmod 2770

or the long way:
chmod 0770
chmod g+s

Subject: What's the fastest way to change the default group in a directory?

Hi Tom,
I'm still making/hearing about mistakes in cs410 with group permissions.
What should a directory with group cs410-2 have as permissions so the group gets propagated when new dirs and files are made?
Thanks,
Holly
