UPDATING THE FAQ INTERFACE

Problem with current page:

- Uses traditional "jump-links" that cause the page to snap and disorient the user.

- Excessive vertical length requires constant scrolling to find relevant topics

- Static layout prevents students from quickly scanning all 19 FAQ items at once

Proposed update:

- Transition to a dynamic "slide-out" accordion system for every question.

- Apply CSS transitions to ensure a smooth animation while maintaining a fixed, compact page width.

- Current website: https://portal.cs.umb.edu/faq/
