

## B5: Multilingual App

# David Le

- Research Topic: Does AI-driven personalization in apps improve user activity and interest.
- What I did implement the chatbot section on our website which used a google ai studio api call
- I also am implementing a saving history context section which saves chats during a session and also summarizes the last n lines to save space
- I also am going to change the prompt to be able to use the saved history to better generate better responses
- Tech stack used: js, html, css, python
