

# Paul M, Group B5, Multilang Wellness App

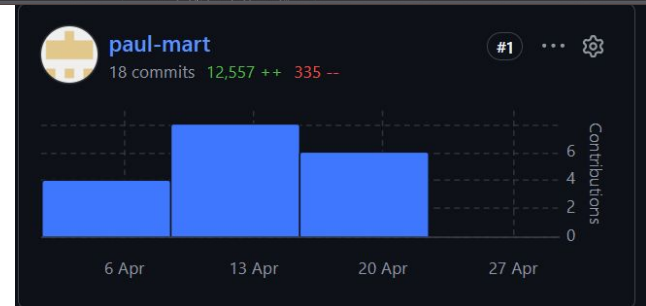

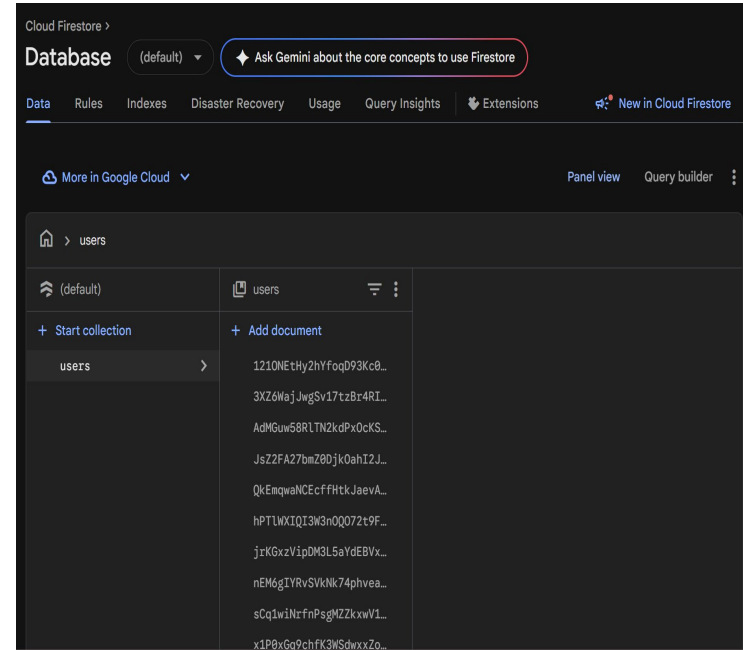

## My work:

- Setting up and configuring the Cloud Firestore database for storing and retrieving user info.
- Configured a centralized .env for the whole team that secured all our API keys, and then helped all team members implement this locally.
- Created main project repository, guided source control for teammates.
- Wrote majority of read.me
- Assisted Priya with sign up screens and storing user data

My code on Github: [B5LZ/mobile-app: Repo contains all of our code, including mine](#)

My artifacts: [home/paulmart/cs410/artifacts](#)

Deployed site: N/A (app in testing)

# T-Shaped Skills

## **Broad Skills**

Assisting teammates with Git, project updates and communication via Discord, working around project vague requirements

## **Deep Skills**

Managing and implementing Firebase

Took lead on architecture decisions  
and assisted local env setups

Developed main landing page

Took lead on deployment and testing  
the app

nnnn.txt:  
home/paulmart/cs410/nnnn.txt

The biggest areas i experienced growth in was database management with Firestore and React.

# Comments/Notes

I have enjoyed this project and I'm happy I got to get experience using firebase.

My research paper: Reducing Hallucinations in Retrieval-Augmented Generation (RAG) Systems Through Chunking and Context Selection
