

Induction

The **principle of mathematical induction** is a useful tool for proving that a certain predicate is true for **all natural numbers**.

It cannot be used to discover theorems, but only to prove them.

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

1

Induction

If we have a propositional function $P(n)$, and we want to prove that $P(n)$ is true for any natural number n , we do the following:

- Show that $P(0)$ is true.
(basis step)
- Show that if $P(n)$ then $P(n + 1)$ for any $n \in \mathbb{N}$.
(inductive step)
- Then $P(n)$ must be true for any $n \in \mathbb{N}$.
(conclusion)

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

2

Induction

Example:

Show that $n < 2^n$ for all positive integers n .

Let $P(n)$ be the proposition " $n < 2^n$."

1. Show that $P(1)$ is true.
(basis step)

$P(1)$ is true, because $1 < 2^1 = 2$.

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

3

Induction

2. Show that if $P(n)$ is true, then $P(n + 1)$ is true.
(inductive step)

Assume that $n < 2^n$ is true.

We need to show that $P(n + 1)$ is true, i.e.
 $n + 1 < 2^{n+1}$

We start from $n < 2^n$:

$$n + 1 < 2^n + 1 \leq 2^n + 2^n = 2^{n+1}$$

Therefore, if $n < 2^n$ then $n + 1 < 2^{n+1}$

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

4

Induction

3. Then $P(n)$ must be true for any positive integer.
(conclusion)

$n < 2^n$ is true for any positive integer.

End of proof.

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

5

Induction

Another Example ("Gauss"):

$$1 + 2 + \dots + n = n(n + 1)/2$$

1. Show that $P(0)$ is true.
(basis step)

For $n = 0$ we get $0 = 0$. True.

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

6

Induction

2. Show that if $P(n)$ then $P(n + 1)$ for any $n \in \mathbb{N}$.
(inductive step)

$$\begin{aligned} 1 + 2 + \dots + n &= n(n + 1)/2 \\ 1 + 2 + \dots + n + (n + 1) &= n(n + 1)/2 + (n + 1) \\ &= (n + 1)(n/2 + 1) \\ &= (n + 1)(n + 2)/2 \\ &= (n + 1)((n + 1) + 1)/2 \end{aligned}$$

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

7

Induction

3. Then $P(n)$ must be true for any $n \in \mathbb{N}$.
(conclusion)

$$1 + 2 + \dots + n = n(n + 1)/2 \text{ is true for all } n \in \mathbb{N}.$$

End of proof.

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

8

Induction

There is another proof technique that is very similar to the principle of mathematical induction.

It is called **the second principle of mathematical induction**.

It can be used to prove that a propositional function $P(n)$ is true for any natural number n .

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

9

Induction

The second principle of mathematical induction:

- Show that $P(0)$ is true.
(basis step)
- Show that if $P(0)$ and $P(1)$ and ... and $P(n)$, then $P(n + 1)$ for any $n \in \mathbb{N}$.
(inductive step)
- Then $P(n)$ must be true for any $n \in \mathbb{N}$.
(conclusion)

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

10

Induction

Example:

Show that every integer greater than 1 can be written as the product of primes.

- Show that $P(2)$ is true.
(basis step)

2 is the product of one prime: itself.

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

11

Induction

- Show that if $P(2)$ and $P(3)$ and ... and $P(n)$, then $P(n + 1)$ for any $n \in \mathbb{N}$. (inductive step)

Two possible cases:

- If $(n + 1)$ is **prime**, then obviously $P(n + 1)$ is true.
- If $(n + 1)$ is **composite**, it can be written as the product of two integers a and b such that $2 \leq a \leq b < n + 1$.

By the **induction hypothesis**, both a and b can be written as the product of primes.

Therefore, $n + 1 = a \cdot b$ can be written as the product of primes.

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

12

Induction

- Then $P(n)$ must be true for any $n \in \mathbb{N}$ with $n > 1$.
(conclusion)

End of proof.

We have shown that **every integer greater than 1** can be written as the product of primes.

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

13

Recursive Definitions

Recursion is a principle closely related to mathematical induction.

In a **recursive definition**, an object is defined in terms of itself.

We can recursively define **sequences, functions and sets**.

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

14

Recursively Defined Sequences

Example:

The sequence $\{a_n\}$ of powers of 2 is given by $a_n = 2^n$ for $n = 0, 1, 2, \dots$

The same sequence can also be defined **recursively**:

$$a_0 = 1$$

$$a_{n+1} = 2a_n \quad \text{for } n = 0, 1, 2, \dots$$

Obviously, induction and recursion are similar principles.

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

15

Recursively Defined Functions

We can use the following method to define a function with the **natural numbers** as its domain:

1. Specify the value of the function at zero.
2. Give a rule for finding its value at any integer from its values at smaller integers.

Such a definition is called **recursive** or **inductive definition**.

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

16

Recursively Defined Functions

Example:

$$f(0) = 3$$

$$f(n + 1) = 2f(n) + 3$$

$$f(0) = 3$$

$$f(1) = 2f(0) + 3 = 2 \cdot 3 + 3 = 9$$

$$f(2) = 2f(1) + 3 = 2 \cdot 9 + 3 = 21$$

$$f(3) = 2f(2) + 3 = 2 \cdot 21 + 3 = 45$$

$$f(4) = 2f(3) + 3 = 2 \cdot 45 + 3 = 93$$

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

17

Recursively Defined Functions

How can we recursively define the factorial function $f(n) = n!$?

$$f(0) = 1$$

$$f(n + 1) = (n + 1)f(n)$$

$$f(0) = 1$$

$$f(1) = 1f(0) = 1 \cdot 1 = 1$$

$$f(2) = 2f(1) = 2 \cdot 1 = 2$$

$$f(3) = 3f(2) = 3 \cdot 2 = 6$$

$$f(4) = 4f(3) = 4 \cdot 6 = 24$$

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

18

Recursively Defined Functions

A famous example: The Fibonacci numbers

$$f(0) = 0, f(1) = 1$$

$$f(n) = f(n-1) + f(n-2)$$

$$f(0) = 0$$

$$f(1) = 1$$

$$f(2) = f(1) + f(0) = 1 + 0 = 1$$

$$f(3) = f(2) + f(1) = 1 + 1 = 2$$

$$f(4) = f(3) + f(2) = 2 + 1 = 3$$

$$f(5) = f(4) + f(3) = 3 + 2 = 5$$

$$f(6) = f(5) + f(4) = 5 + 3 = 8$$

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

19

Recursively Defined Sets

If we want to recursively define a set, we need to provide two things:

- an **initial set** of elements,
- **rules** for the construction of **additional** elements from elements in the set.

Example: Let S be recursively defined by:

$$3 \in S$$

$$(x + y) \in S \text{ if } (x \in S) \text{ and } (y \in S)$$

S is the set of positive integers divisible by 3.

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

20

Recursively Defined Sets

Proof:

Let A be the set of all positive integers divisible by 3.

To show that $A = S$, we must show that $A \subseteq S$ and $S \subseteq A$.

Part I: To prove that $A \subseteq S$, we must show that every positive integer divisible by 3 is in S .

We will use mathematical induction to show this.

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

21

Recursively Defined Sets

Let $P(n)$ be the statement " $3n$ belongs to S ".

Basis step: $P(1)$ is true, because 3 is in S .

Inductive step: To show:
If $P(n)$ is true, then $P(n+1)$ is true.

Assume $3n$ is in S . Since $3n$ is in S and 3 is in S , it follows from the recursive definition of S that $3n + 3 = 3(n+1)$ is also in S .

Conclusion of Part I: $A \subseteq S$.

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

22

Recursively Defined Sets

Part II: To show: $S \subseteq A$.

Basis step: To show:

All initial elements of S are in A . 3 is in A . True.

Inductive step: To show:

$(x + y)$ is in A whenever x and y are in A .

If x and y are both in A , it follows that $3 \mid x$ and $3 \mid y$.
As we already know, it follows that $3 \mid (x + y)$.

Conclusion of Part II: $S \subseteq A$.

Overall conclusion: $A = S$.

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

23

Recursively Defined Sets

Another example:

The well-formed formulas of variables, numerals and operators from $\{+, -, *, /, \wedge\}$ are defined by:

x is a well-formed formula if x is a numeral or variable.

$(f + g)$, $(f - g)$, $(f * g)$, (f / g) , $(f \wedge g)$ are well-formed formulas if f and g are.

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

24

Recursively Defined Sets

With this definition, we can construct formulas such as:

$(x - y)$
 $((z / 3) - y)$
 $((z / 3) - (6 + 5))$
 $((z / (2 * 4)) - (6 + 5))$

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

25

Recursive Algorithms

An algorithm is called **recursive** if it solves a problem by reducing it to an instance of the same problem with smaller input.

Example I: Recursive Euclidean Algorithm

procedure gcd(a, b: nonnegative integers with $a < b$)
if $a = 0$ **then** gcd(a, b) := b
else gcd(a, b) := gcd(b mod a, a)

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

26

Recursive Algorithms

Example II: Recursive Fibonacci Algorithm

procedure fibo(n: nonnegative integer)
if $n = 0$ **then** fibo(0) := 0
else if $n = 1$ **then** fibo(1) := 1
else fibo(n) := fibo(n - 1) + fibo(n - 2)

February 22, 2018

Applied Discrete Mathematics
Week 5: Mathematical Reasoning

27

Recursive Algorithms

Recursive Fibonacci Evaluation:
