Name: **Solutions**

Date: 09/11/18

Instructions:

- Complete this worksheet as best you can. It will not be graded, but completing it will count towards your participation and attendance grade. Please put your name on it and hand it in before leaving class.

**Problem 1.** What line of code is necessary for printing the message "Hello World" in Python for this class?

```python
import stdio
import sys

stdio.writeln("Hello World")
```

**Problem 2.** How would you run a python program saved as "compute_result.py" that takes no arguments on the command-line?

A. python3 compute_result.py  
B. compute_result.py  
C. run compute_result.py

![Radio buttons]

**Problem 3.** Write the line of code necessary for printing the value of the second command-line argument for a Python program.

```python
import stdio
import sys

stdio.writeln(sys.argv[2])
```
